Maturity Distribution^{2,5}

¹ As a measure of current income, 7-day yield more closely reflects the fund's current income-generating ability than the total return.

² Portfolio composition is subject to change at any time.

³ Please see the prospectus for expenses as of the fund's most recent fiscal year-end. Operating expenses may vary from month to month.

⁴ Any order in proper form placed with BNY Mellon Investment Adviser, Inc. by the fund's trading deadline and for which federal funds are received by 6:00 PM ET will be effective on that date. Investors will earn the dividend declared on that day.

⁵ Maturity distribution reflects the final maturity date except for floating rate securities for which the next reset date is reflected.

⁶ WAM is a measure of the average effective maturity of all of the underlying money market instruments in the fund, weighted to reflect the relative percentage ownership of each instrument. WAM calculations allow for the maturities of certain securities with periodic interest rate resets to be shortened. Generally, for money market funds, WAM can be used primarily as a measure of relative sensitivity to interest rate changes.

⁷ WAL is a measure of the average final maturity of all of the underlying money market instruments in the fund, weighted to reflect the relative percentage ownership of each instrument. Unlike WAM, WAL calculations do not allow maturities to be shortened for periodic interest rate resets. Accordingly, WAL will generally be higher than WAM.

⁸ Monthly yield history is the annualized distribution rate that is based upon dividends per share from net investment income paid during the period, divided by the period ended maximum offering price per share, adjusted for capital gains (IF ANY) distributed during the period, and annualized based upon the number of days in the distribution period.
